

Workshop 4

| | |
|----|---|
| 1. | Create a <p> element with an id. Use JavaScript to select the element by its id and change the text inside it. |
| 2. | Create an HTML element with a class. Use the Class Selector in JavaScript to select the element by its class and change its font-size and background-color. |
| 3. | What are the differences between querySelector and querySelectorAll? |
| 4. | Create a button. When the button is clicked, an alert message should pop up displaying the text "Button clicked". |
| 5. | Create input fields for "Name" and "Email", along with a submit button. Write a JavaScript function to handle the submission so that when the button is clicked, the entered details are displayed on the page. |
| 6. | Create an input field for the user to enter a number, along with a button. When the user clicks on the button, display the multiplication table of that number (from 1 to 10) below the form. |
| 7. | How do you add a new class to an HTML element using JavaScript? Give an example. |
| 8. | How do you add a new id to an HTML element using ID? Give an example. |
| 9. | What are the differences between Event Handlers and Event Listeners? |
